COMPLIANCE & QUALITY COMMITMENT

Quality commitment.

A strong brand reputation is not just about the perfect gift with the right printed message. Continuously improving our products and services is key to meet and exceed our customers' requirements and quality objectives. We operate fully in respect to all applicable laws and regulations. Where feasible, we go even further, by applying recommendations and implementing best industrial practices. We work with a dedicated Quality Control Department both in Europe and Asia and a strict Quality Assurance Policy to guarantee consistent quality of all our processes and products.

Our company participates in the amfori Business Social Compliance Initiative. As amfori BSCI Participant, our company is committed to the values and principles set out in the amfori BSCI Code of Conduct and to meeting, within our sphere of influence, our responsibility to respect human rights. In this regard, it remains fundamental to our company's approach to integrate the amfori BSCI Code of Conduct, when doing business with all our partners regardless of where they source in the world.

The pictures of the items reproduced in our catalogue are not contractual. We reserve the right to change without notice the product and packaging specifications, colours or prices of any items mentioned in this catalogue.

Product Certification.

Our team works tirelessly to deliver product of the highest quality in a sustainable way and at the most competitive cost. The More Than Christmas products are assessed carefully and comply with EU safety, health and environmental requirements. To ensure all products meet the European qualification criteria, quality assurance tests have been performed and all relevant test reports are available and are not older than 3 years.

REACH.

The EU REACH regulation applies in different ways in different product areas. It addresses the production and use of chemical substances and their potential impact on health and the environment. Since standards are subject to constant change we closely follow the latest requirements (Annex XVII). Via our team of specialists we can ensure that there are no restricted substances in the products sold and printing inks used.

EMC and RoHs certification.

Technology and gadgets items have helped make our daily life easier and more time efficient. But, whether we use external storage devices, speakers, earbuds, keyboards or any of the many other items available, we need to control the components used to negate the potential damaging effects of electromagnetic interference. In order to ensure our products function correctly and as designed, EMC testing has been implemented. EMC tests the ability of devices to withstand interference from other electrical or electronic equipment and environments and verify that any emissions cannot cause harmful interference with other electrical or electronic equipment. RoHs (Restriction of Hazardous Substances) tests determine the values of the six restricted RoHS substances (such as Cadmium, Lead and Mercury).

CE marking.

CE is an abbreviation for "Conformité Européenne" (European Conformity). In this catalogue you can find a great combination of items for any occasion over the widest range of categories. As part of our compliance procedure all products are classified under the relevant European directives and regulations. However, only for product categories subject to relevant directives or regulations are required (and allowed) to bear CE marking. Mentioned CE marking is a mandatory conformity marking within the European Economic Area (EEA). List of relevant product categories is available on request.

TECHNOLOGY & ACCESSORIES

COMFORT AND USABILITY

From portable Bluetooth speakers and headphones, to a range of power banks and micro USB's, for all owners of a Qi enabled device a wireless charger is now becoming the device to have. In addition to a new selection of wireless chargers, in this section you will find attractive and convenient technology items recipients will love to receive.

PRINTING TECHNIQUES

Having your logo printed with the widest range of printing techniques has never been so easy. These are the main techniques used to print your logo.

Laser engraving

Laser engraving can be applied to items made of natural materials like wood and metals. With laser engraving the result of branding is precise, clean and permanent.

Pad printing

Pad printing is a technique where rubber stamps are used to print the logo on the item. With this technique you achieve a sharper finish and a perfect colour matching (PMS) is achievable.

Screen Printing

Main advantage of screen printing is the unique qualitative result you can achieve. It can be applied on a variety of materials but mostly used on fabrics since a larger print size can be applied.

Screen Transfer

Economic option for full colour print via screen transfer print. The logo is printed on a sheet by means of serigraphy (which allows 1 to 8 colours) and then transferred to the product. Subject to sight of artwork.

Digital Transfer

Digital Transfer is one of the most popular methods for full colour logos and designs. This Four Colour Process hits over thousands of colours resulting in a photographic quality decoration.

Ceramic transfer

The technique of ceramic transfer printing is applied to ceramic promotional cups and items where the logo is printed on a sheet and transferred by heat.

Doming

The doming procedure consists of printing the logo on a self adhesive label domed with a 2-component resin layer (epoxy). It is a durable solution and the result cannot be easily scratched or dented.

Embossing

Embossing is a popular technique for marking products made of leather, PU or cardboard. The logo is stamped on the material being sunk and making it indelible.

Embroidery

Embroidery is a very popular technique on products such as caps, textiles or advertising bags where the finishing touch is created with the sewn logo with woven threads.

Digital Label

Digital Label is used on items where no other technique can be applied. With this method full colour label is printed and applied to the most optimum position on the product.

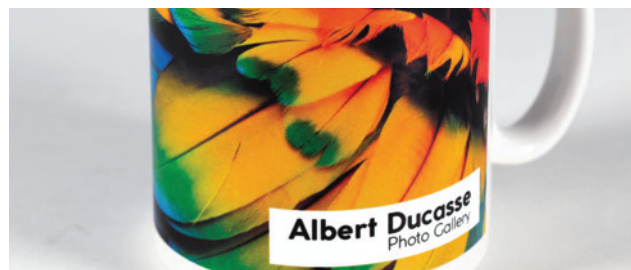

Digital Printing

Digital printing is done by placing the product under a four-color digital printer. Compared to the conventional technique it is a more environmental friendly solution.

Roundscreen

Round screen printing is a method that allows round personalisation. It is an optimum solution for popular reusable bottles. The print position can be larger than can be achieved using the traditional screen or pad printing methods.

Sublimation

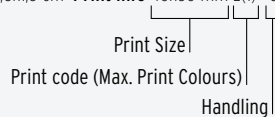

Sublimation is one of the few methods you can print full coloured images onto hard surfaces or polyester coated items. Number of colours is unlimited for complete customized logos.

PRINTING INFORMATION

Cleandesk M09391
